

# PNEU

collection: *.exnovo*  
design: *Selvaggia Armani*

SMALL

**.exnovo®**

code  
**Light E65**  
**Slot E66**  
**Globes E67**

category  
**lighting**

type  
**table**

materials (shade \ structure)  
**laser sintered polyamide \**  
**powder coated steel**

colours (shade \ structure)  
**white \ white, grey, black**

maximum dimensions  
**Ø16,5x34,6 cm**

shade dimensions  
**Ø16,5x10,7 cm**

weight  
**1,20 Kg**

electrical components  
**transparent 2 poles cable**

light source  
**halogen, G9, 220V,**  
**48W ECO max.**

## HOW IT'S MADE

This product is produced by the 3D Printing technology: it's a 3D electronic file transformed into a solid part. Due to the manufacturing method, none of the products are the same: it's impossible to realize the .exnovo monolithic objects using the traditional technologies.

This digital sculpture is unique with its essential characteristics and very close to a work of art. Treat it carefully!

## HOW TO USE

### Only indoor use

The plastic parts are sensitive to ultraviolet rays and turn to pale yellow as time goes by: for this reason, we suggest to avoid direct exposure to sunshine.

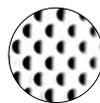

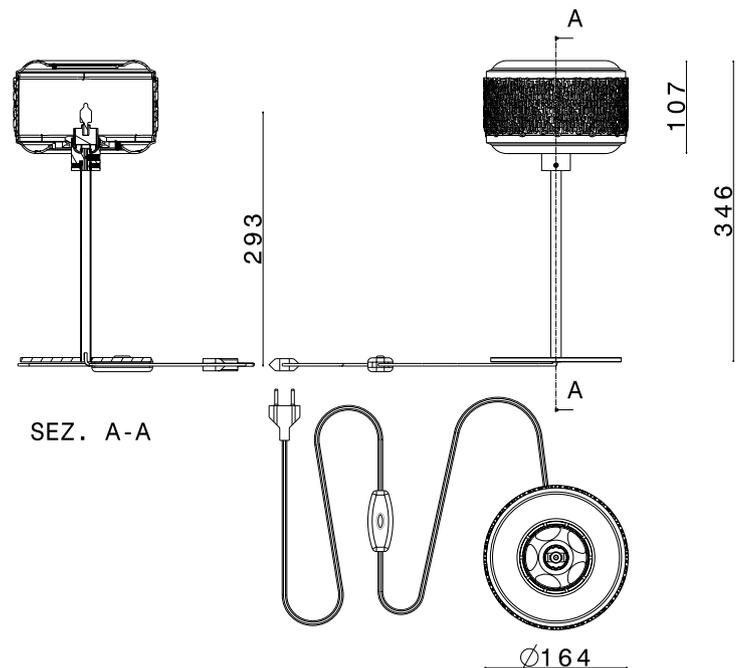

### Shade cleaning

The shade can be cleaned with water and soap or can be put in the dishwasher.

### Disposal

The shade is completely recyclable. The components have to be divided and disposed of using the separate refuse collection, to avoid environmental damages.

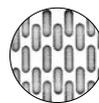

*Also the consolidates technologies and the objects that we daily look at, without really see them, may inspire a metamorphosis from lifeless world to vital and changing light one, that gives life to 3D Printing. In this way, the Pneu series lamps were born from race tyres shape, thought as rotating of 90 degrees. Three different shade textures, put together in four unlike models, create twelve ways of lighting in style. Pneu series lamps are different thanks to the frontal surface, but they keep intact the former matrix coming from the tyre shape.*
