.exnovo presents Volume, the modular collection of luminous reflective sculptures by Marco Lafiandra

A new line of totemic objects for today's budding Narcissus

The atmospheres are rarified, charged with the inter-galactic futurism of Roger Vadim's Barbarella, the seductive space traveller from the future, aeons away. As for visual impact, the iconic power of Paco Rabanne's first metal garments springs to mind, in his visionary haute-couture tribute to the moon landing. Thoughts such as these are natural on first sight of Volume.

In fact the Trento-based company is a pioneer in the professional 3D printing of lighting accessories and furnishings. The new line from .exnovo features a polyamide light diffuser, available in a white version sintered by professional 3D printing. This combines with a metallized reflective surface in bronze stainless steel.

The collection consists of 6 items, available in different sizes (minimum dimensions 4,5 cm wide x 12,2 cm high and 24,0 cm deep – maximum dimensions 31,5 cm wide x 15,2 cm high and 32,0 cm deep), suitable for use with LED stripes from 2 to 10 W. But the component parts fit together in infinite ways. Ranging freely across space, they bathe bare walls in soft light punctuated by heavy metal flashes and restless, shadowy contrasts.

With this modular line of object-icons, today's budding Narcissus can drift away into rapt self-contemplation. A multi-faceted collage of luminous reflective sculptures beams back the image of the self.

Spectacular totemic pieces form the keynote of this shapely collection akin to avant-garde architecture or elements from outer space, rocketed in from a new era to bedeck wall surfaces and facades in a new and contemporary futurism. These collections of digital lighting accessories express more than .exnovo's passion for professional 3D printing. They are founded on a love of creativity applied to design, and on a pride in expert craftsmanship. These creations are rich in beauty, culture and history, a perfect synthesis of avant-garde technology, visionary design and expressive power.
